Introduction

The Andalusian eHealth Library (BV-SSPA) was set up in 2006 under the scope of strategy number IV, Knowledge Management, of the II Quality Plan for the Andalusian Health System (2005-2008), which established the key process: To guarantee the knowledge exchange within the Health System, with the following specific aims:

• To define and develop a scientific information strategy for the Health System.
• To establish the Andalusian eHealth Library.
• To coordinate the Andalusian Health documentary centers.
• To establish strategic agreements with similar organizations.

During its ten years of operation, the BV-SSPA has focused on providing Health System Professionals with the best scientific information available, in a timely manner, for clinical decision purposes, as well as research and training; in other words, the knowledge manager which integrates and coordinates the hospital libraries.

Objective

The objective of this work is to demonstrate that the BV-SSPA has become the Knowledge Manager of the Andalusian Public Health System, providing its professionals with the appropriate tools and resources from the most relevant Health scientific information available in databases and impact factor journals, as well as the particular software which helps them to take the best clinical, research and training decisions. It will be proven that the BV-SSPA has managed to provide the Andalusian Health Professionals with these valuable scientific resources while coordinating the library network services

Results

2007: The central purchase of resources is initiated; from 975 subscribed titles in 2007 to 3,139 in 2016
2008: Andalusian Health Professionals can Access the scientific and professional information available, in a timely manner, for clinical decision purposes, as well as research and training; in other words, the knowledge manager which integrates and coordinates the hospital libraries.
2009: The interlibrary Loan Service is set up. This service has provided the BV-SSPA users with more than 150,000 articles for the last seven years.
2010: The BV-SSPA launches its profile on social media and web 2.0 tools addressed to both health professionals and individuals.
2011: The Institutional Repository and the Software Impactia are launched.

During the past ten years, the BV-SSPA has actively participated in scientific events as attendant and also as organizer. This is the case of the workshop of the Andalusian Health Libraries which took place every year from 2008 until 2011, the 2nd European National Digital Libraries of Health Conference held in Seville in 2008, the organization of the XIV Health Science Information National Conference (Bibliosalud) in 2011, and currently the 15th EAHIL Conference in Seville

Metodology

The analysis of these last ten years has been possible thanks to the annual usage and statistic reports which are issued by the BV-SSPA. These reports demonstrate that according to the Health Ministry Strategy this library copes well with the user needs and librarians.

The annual reports collect the results of the following work groups: Marketing and Communication; Subject areas, Interlibrary loan service, Impactia, Institutional Repository, as well as the data from the user forms and followers on BV-SSPA social media such as Facebook, Twitter, Slideshare and Youtube

Conclusions

The transformation of traditional hospital libraries into a library network integrated in the Andalusian eHealth Library, meant a change of the health science information resource management, and therefore the role of librarians.

Innovative activities such as ours, supported by the Andalusian Government, have been both internationally and nationally recognized. This also means budgetary savings for the health system and the equality of access to resources and as a result, the European Institute of Public Administration granted the BV-SSPA with the Cross-Administrative Honourable Mention and the Best Practice Certificate in 2013.
